

Science Forum

These articles throw a glimpse on the lives of some great Indian scientists. Their research contributions have substantial impact on development of understanding basic and advanced scientific concepts. Their works have transformed Nation's research competencies to next level. Research and technology can change a developing nation like India into a developed one. With only two lakh full time researches in a population of nearly 1.3 billion, India ranks below Chile, Kenya and many other countries in terms of density of its scientific workforce. The present scenario can be changed if students get motivation regarding research works. Knowing about lives and works of these scientists can inspire youngsters. These articles are an attempt to motivate students and will help them understand difficulties encountered by them during their research work.
